References This allows the one I mentioned in the question to add a series of labels to a button on a form, and display them in a listbox. A: I don't know if this is the recommended method to use with labels, as they are meant for simple text. However, I think the code below should work. It does it for a button and shows the results in a ListBox. You can right click on the form to add a label and change its properties, if you want: procedure TForm1.Label1Click(Sender: TObject); var Labels: TStringList; LabelsX, X: Integer; Result: string; NewLabel: TLabel; begin Labels := TStringList.Create; try Labels.Text := 'A5'; LabelsX := 1; Result := ""; NewLabel := TLabel.Create(Self); try NewLabel.Name := 'Label' + IntToStr(LabelsX); NewLabel.Caption := Result; Result := Result + 'A'; NewLabel.Parent := Self; NewLabel.Left := (LabelsX - 1) * 50; NewLabel.Top := 7; NewLabel.Height := 19; NewLabel.Width := 80; NewLabel.Tag := '0'; NewLabel.TextAlign := TTextAlign.taLeftJustified; NewLabel.Alignment := TAlignment.taLeft; NewLabel.AutoSize := True; NewLabel.Visible := True; finally NewLabel.Free; end; Labels.Add(Result); finally Labels.Free; end; ListBox1.Items.AddObject('Label' + IntToStr(LabelsX), NewLabel); 1cb139a0ed
