Q: Delete string from text file in vba I want to Delete the last string in a text file in vba. I have an excel file with a text file and i want to delete the last string in this text file. So how can I do that? A: You can use the Substring method to extract a specified number of characters from the beginning of a string, using the substring method. For example, to remove the last five characters from the end of the string: `str = Range("B10").Value` `Range("B10").Value = Left$(str, Len(str) - 5)` Note that this will leave the remaining character string in the cell. If you wish to remove that too, change the first line to: `str = Range("B10").Value` `Range("B10").Value = Replace$(`
